

1       ABSTRACT:

2           A method for creating unique digitized image passwords  
3       comprised of creating the digitized image as a password to enable  
4       access to the computer, storing the digitized image password on  
5       keypad removable storage means, assigning a separate numerical key  
6       or sequence of numbers to the digitized image password on the  
7       keypad device, inserting the digitized image password on the  
8       removable storage means into the keypad device when access to the  
9       computer is desired, inserting the numeric code or sequence,  
10      comparing the code sequence with the digitized image, comparing the  
11      digitized image with the digitized image stored on the computer  
12      storage means, and if a match is obtained, enabling access to the  
13      computer.
